

SYSTEMS AND METHODS FOR CONDUCTING DUE DILIGENCE

Abstract of Disclosure

Methods and systems for conducting due diligence are described. In one embodiment, the method comprises identifying data that will be used to assemble at least one standard documentation file, at least one data collector to collect the identified data and a time for collection of the identified data. The identified data is received and stored and the effectiveness of the data collection is evaluated. The standard documentation file is then assembled.

Figures

Figure 1: A line graph showing the relationship between the number of figures and the number of pages. The x-axis represents the number of figures (0 to 10) and the y-axis represents the number of pages (0 to 10). The data points are (0, 0), (1, 1), (2, 2), (3, 3), (4, 4), (5, 5), (6, 6), (7, 7), (8, 8), (9, 9), and (10, 10). The graph shows a direct linear relationship where the number of pages increases by one for every additional figure.
